

# WINDOWS SERVER 2016 PROJECTS

## PROJECT I

Add a new disk into your virtual server with a size of 30 Gb and make it available for users. The label name (E) for the new volume

## PROJECT II

Create a bare metal backup of the windows server 2016 and store into the new volume or disk called E. Now go to your desktop all delete all the files, folders or scripts that you created, to recover it you have to install the backup that you did early then double check if all files, folders or scripts has been recovered.

Please after deleting all files, directories and scripts empty the recycle bin.

Please send me your projects through telegram.

Good Luck!!!!!!!!!!
