

The computer Name is assigned automatically by default, so change it.

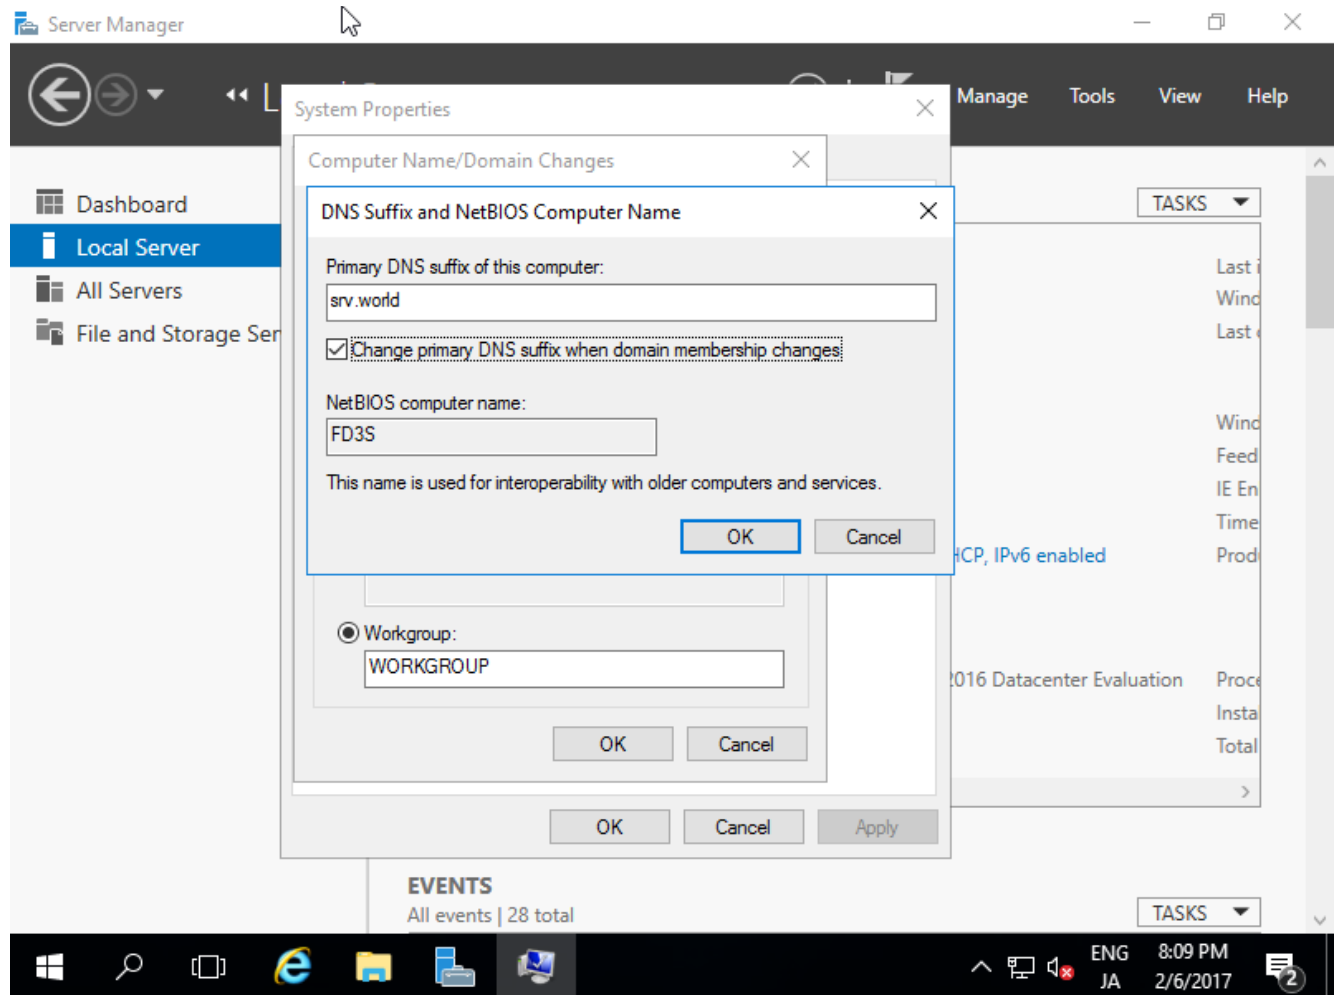

[2] Move to [Computer Name] tab and click [Change] button.

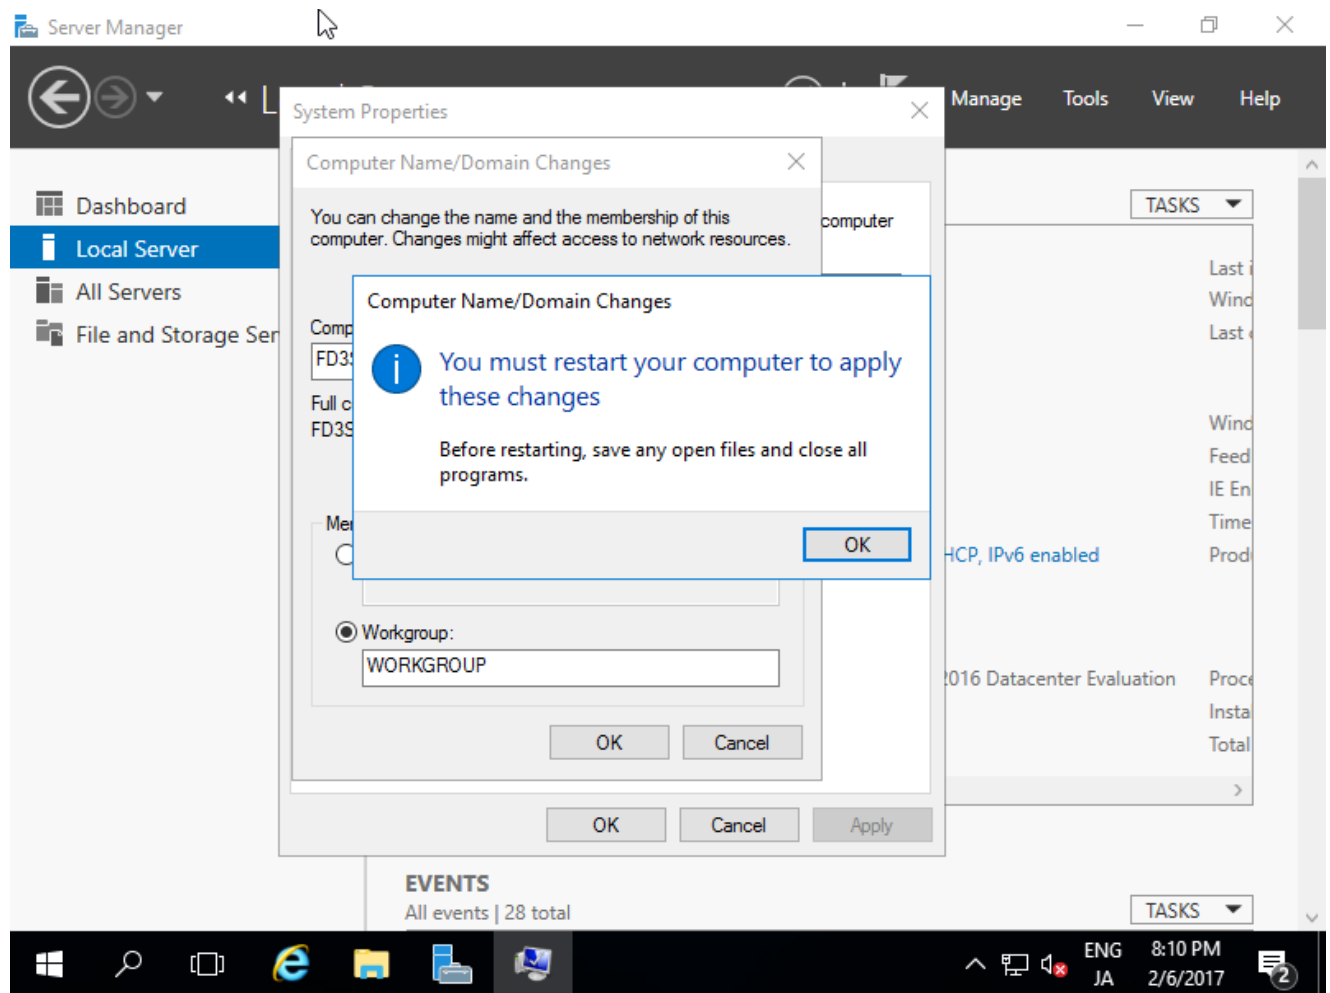

[3] Input any Computer Name you like in [Computer Name] field and next, click [More...] button.

[4] Input Domain name this Computer is in.

[5] Restarting Computer is required for applying changes.

[6] Computer Name is changed normally.

The screenshot displays the Windows Server Manager interface. The left-hand navigation pane includes links to the Dashboard, Local Server (which is currently selected), All Servers, and File and Storage Services. The main area of the console is titled 'Local Server' and shows the 'PROPERTIES' for the server 'FD3S'. The properties are organized into two sections. The first section lists various server roles and their status: Windows Firewall is 'Public: On', Remote management is 'Enabled', Remote Desktop is 'Disabled', NIC Teaming is 'Disabled', and Ethernet is 'IPv4 address assigned by DHCP, IPv6 enabled'. The second section provides information about the operating system version ('Microsoft Windows Server 2016 Datacenter Evaluation') and hardware information ('Red Hat KVM'). Below the properties, there is an 'EVENTS' section showing 'All events | 33 total'. The Windows taskbar at the bottom of the screen shows the Start button, search icon, and several pinned applications including File Explorer and the Server Manager. The system tray on the right indicates the language is 'ENG JA', the time is '8:14 PM', and the date is '2/6/2017'.
